

AMENDMENT TO THE CLAIMS

The following claim set replaces all prior versions, and listings, of claims in the application:

1. - 10. (cancelled)

11. (currently amended) A multilayer blow molded article formed from a layer of an [[the]] amorphous wholly aromatic polyester amide as claimed in claim 1 and another layer formed of another polymer, wherein the amorphous wholly aromatic polyester amide is obtained by copolymerizing:

- (A) 4-hydroxybenzoic acid,
- (B) 2-hydroxy-6-naphthoic acid,
- (C) p-aminophenol; and
- (D) isophthalic acid as an aromatic dicarboxylic acid, wherein
 - (1) the ratio of (C) the p-aminophenol is from 7 to 35% by mol,
 - (2) the ratio of isophthalic acid as a bending monomer among starting material monomers is from 7 to 35% by mol,
 - (3) the ratio ((A)/(B)) between (A) the 4-hydroxybenzoic acid and (B) the 2-hydroxy-6-naphthoic acid is from 0.15 to 4.0,
 - (4) a melting point is not observed by DSC measurement at a temperature rising rate of 20°C/min and
 - (5) the glass transition temperature of the wholly aromatic polyester amide is from 100 to 180°C.

12. (original) The multilayer blow molded article as claimed in claim 11, wherein the another polymer is polyolefin.

13. (original) The multilayer blow molded article as claimed in claim 12, wherein the polyolefin is a high density polyethylene.

14. (previously presented) The blow molded article as claimed in claim 11, wherein the blow molded article is a fuel tank.

15. (new) The multilayer blow molded article as claimed in claim 11, wherein the another polymer is selected from the group consisting of polyolefins, aromatic polyesters formed of an aromatic dicarboxylic acid and a diol, polyacetals, polystyrenes, polyvinyl chlorides, polyamides, polycarbonates, ABS resins, polyphenylene oxides, polyphenylene sulfides, and fluorocarbon resins

16. (new) The multilayer blow molded article as claimed in claim 15, wherein the another polymer is a polyethylene terephthalate or a polybutylene terephthalate.

17. (new) The multilayer blow molded article as claimed in claim 11, wherein the multilayer blow molded article is obtained by molding a multilayer film or multilayer sheet formed from the amorphous wholly aromatic polyester amide and the another polymer at a temperature which is 80 to 120°C higher than the glass transition temperature of the amorphous wholly aromatic polyester amide.

18. (new) A multilayer film or multilayer sheet formed from a layer of an amorphous wholly aromatic polyester amide and another layer formed of another polymer, wherein the amorphous wholly aromatic polyester amide is obtained by copolymerizing:

- (A) 4-hydroxybenzoic acid,
- (B) 2-hydroxy-6-naphthoic acid,
- (C) p-aminophenol; and
- (D) isophthalic acid as an aromatic dicarboxylic acid, wherein
 - (1) the ratio of (C) the p-aminophenol is from 7 to 35% by mol,
 - (2) the ratio of isophthalic acid as a bending monomer among starting material monomers is from 7 to 35% by mol,
 - (3) the ratio ((A)/(B)) between (A) the 4-hydroxybenzoic acid and (B) the 2-hydroxy-6-naphthoic acid is from 0.15 to 4.0,

- (4) a melting point is not observed by DSC measurement at a temperature rising rate of 20°C/min and
- (5) the glass transition temperature of the wholly aromatic polyester amide is from 100 to 180°C.

19. (new) The multilayer film or multilayer sheet as claimed in claim 18, wherein the another polymer is polyolefin.

20. (new) The multilayer film or multilayer sheet as claimed in claim 18, wherein the another polymer is polyolefin.

21. (new) The multilayer film or multilayer sheet as claimed in claim 20, wherein the polyolefin is a high density polyethylene.

22. (new) The multilayer film or multilayer sheet as claimed in claim 18, wherein the another polymer is selected from the group consisting of polyolefins, aromatic polyesters formed of an aromatic dicarboxylic acid and a diol, polyacetals, polystyrenes, polyvinyl chlorides, polyamides, polycarbonates, ABS resins, polyphenylene oxides, polyphenylene sulfides, and fluorocarbon resins

23. (new) The multilayer film or multilayer sheet as claimed in claim 22, wherein the another polymer is a polyethylene terephthalate or a polybutylene terephthalate.
